

## **Fezolinetant (Veoza) - Important Information for Patients**

We have received a number of enquiries about fezolinetant (Veoza), a new non-hormonal medication for menopausal hot flushes and night sweats, following media coverage.

### **Why we cannot prescribe it yet**

Although fezolinetant has been approved nationally for NHS use, it cannot be prescribed locally at this time because it has not yet been added to the list of medicines approved for prescribing in this area.

### **How we can support you**

We continue to support any woman experiencing menopausal symptoms. In your consultation, we can:

- Review your symptoms and medical history
- Discuss all currently available treatments, including both hormonal and non-hormonal options
- Provide safe and effective alternatives while we await the local availability of fezolinetant
